

Aqua B123

Neutralizing Amine for Dairy Use

DESCRIPTION:

Aqua B123 is an aqueous blend of neutralizing amine for condensate systems having the potential of contacting dairy products. Aqua B123 will elevate the pH of the condensate returns over the entire length of the system. It may be fed to the boiler steam header or steam line. Corrosion protection is achieved by adjustment of pH into the neutral to slightly alkaline zone. Aqua B123 is suitable for use where steam may contact milk or milk products.

APPLICATION AND DOSAGE:

Aqua B123 is best fed continuously to the boiler steam header. A sufficient amount of Aqua B123 should be used to maintain a pH of 8.4 – 9.4 in the condensate.

PRODUCT DATA:

pH:	12.0	FREEZE POINT:	-75°C
Flash Point:	N/A	SPECIFIC GRAVITY:	0.90
COLOR:	Colorless	FORM::	Liquid

HANDLING:

Harmful if swallowed; do not induce vomiting. Avoid contact with skin, eyes or clothing. If contacted, wash skin with water. If eyes are affected, flush with ample water and get medical attention. Refer to Safety Data Sheets for additional information.
