

# BREWMATE

## Full Multipurpose Boiler Water Treatment

### DESCRIPTION:

BrewMate is a full multipurpose boiler water treatment product combining polymeric/ chelant scale control with cool water oxygen scavenging, alkalinity additives, nitrite corrosion inhibition and amine condensate treatment. Certain feed water tanks lack the temperature required for typical boiler oxygen scavengers to work effectively, BrewMate does not require elevated temperature in order to be effective.

### APPLICATION AND DOSAGE:

BrewMate should be fed via a chemical injection pump to the feed water tank. Dosage rates can be estimated by adding 20 mg/L product for every 1 mg/L dissolved oxygen in the feed water. Apply extra BrewMate to maintain a feed water dissolved oxygen level below 1 ppm, a boiler water pH of greater than 10.5 and condensate pH of 8.4-9.4.

### PRODUCT DATA:

FORM:	Liquid	FREEZE POINT:	-1 Degrees C
pH:	11.5	SPECIFIC GRAVITY:	1.13 g/L

### HANDLING:

Avoid contact with skin, eyes, or clothing. If contacted, flush skin and/or eyes with large quantities of fresh water and get medical attention. Refer to Safety Data Sheets for more instructions.
